

# Data Retention Policy

Version 1.0 | Last updated 03.11.2021

## 1. Specification

- a. This policy covers data retention for TezID website and services (“**Service**”).
- b. TezID collects data for the verification of proofs (“**Proof**”) ref. Terms and Privacy Policy for a more in depth description of data
- c. TezID encrypts all stored personal data. Unless explicitly allowed by the user (“**User**”) (KYC purposes) data is encrypted in such a way as to make it impossible even for us to decrypt (strong cryptographic hashes).
- d. TezID is also not an account based system
- e. The nature of our data (encrypted) and the Service (not account based) makes it impossible in some cases and impractical in other cases, to connect a piece of stored data with a **User** of the Service.

## 2. Data retention

- a. For encrypted proof data, where it is impossible to decrypt and impractical to connect data to a User, we store this data for the lifetime of the Service.
- b. For encrypted proof data, where it is possible to decrypt (KYC purposes), we store this data for the lifetime of the Service.
- c. In cases where data referred to in 2b) is requested to be modified or deleted by the User, terms and conditions shall apply.
